

## CLAIMS

1           1.     A lint roller holder assembly comprising:  
2                 a lint roller support having an outer cylindrical outer surface,  
3                 an elongated handle,  
4                 said handle being axially slidably mounted to said lint roller support between  
5                 a first position in which said handle extends axially outwardly from one end of said  
6                 lint roller support, and a second position in which said handle is at least partially  
7                 contained within an interior of said lint roller support.

1           2.     The invention as defined in claim 1 and comprising means for locking  
2                 said handle in said first position.

1           3.     The invention as defined in claim 2 wherein said locking means  
2                 comprises a flexible tab on said handle, said tab engaging a recess on said roller  
3                 support when said handle is in said first position.

1           4.     The invention as defined in claim 1 wherein said lint roller support  
2                 includes a pair of diametrically opposed longitudinally extending slots, said handle  
3                 comprising a pair of spaced outwardly extending guides, each guide being slidably  
4                 mounted in one of said slots.

1           5.     The invention as defined in claim 1 wherein said lint roller support  
2 comprises a pair of semicircular sections, said sections being attached together.

1           6.     The invention as defined in claim 5 wherein each lint roller section is  
2 substantially identical to the other lint roller section.

1           7.     The invention as defined in claim 1 wherein said handle comprises a  
2 pair of sections, said sections being secured together.

1           8.     The invention as defined in claim 7 wherein each handle section is  
2 substantially identical to the other handle section.

1           9.     The invention as defined in claim 5 wherein said lint roller support  
2 sections are constructed of a plastic material.

1           10.    The invention as defined in claim 7 wherein said handle sections are  
2 constructed of a plastic material.

1           11.    The invention as defined in claim 5 wherein each lint roller support  
2 section comprises a pair of spaced apart and parallel sides, each lint roller support  
3 section having at least one pin adjacent one side and at least one socket adjacent the

4 other side, said pin(s) engaging said socket(s) when said lint roller support sections  
5 are secured together.

1 12. The invention as defined in claim 7 wherein each handle section  
2 comprises a pair of spaced apart and parallel sides, each handle section having at least  
3 one pin adjacent one side and at least one socket adjacent the other side, said pin(s)  
4 engaging said socket(s) when said handle sections are secured together.

1 13. The invention as defined in claim 1 wherein said lint roller support  
2 includes a plurality of flexible fingers dimensioned to entrap a tubular and cylindrical  
3 lint roller on said lint roller support, said lint roller support rotatably supporting said  
4 lint roller.
